

## Special Issue

# Psychological and Social Support for Pain Management

### Message from the Guest Editor

Pain, and especially chronic pain, represents a major epidemic. Many clinical and scientific efforts are being undertaken to develop better therapeutic approaches, but we are still far from fully understanding pain and developing an effective treatment. In this sense, we know that psychological variables and social determinants have a fundamental role in the development and chronification of pain, and are a potential pathway in its treatment. Therefore, this Special Issue aims to compile relevant contributions on the biopsychosocial approach to pain, paying special attention to the psychological and social variables involved in pain.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
