The Role of Emotion and Intuition in Human Psychology and Behavior

Message from the Guest Editors

Although the significant role of emotion and intuition in human psychology and behavior has been acknowledged by psychologists and economists, it remains unclear how emotion and intuition affect human psychology and behavior and underlying neural mechanisms. Therefore, the aim of the current research topic is to explore cognitive and neural mechanisms underlying the influence of emotion and intuition on human psychology and behavior. Research can range from emotion, intuition, emotion and intuition in reasoning to decision making in life, using behavioral, electrophysiological, fMRI and eye-tracking techniques are all encouraged. We are particularly looking for original research articles, case series, meta-analyses and comprehensive reviews that explore our topic.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
