

Special Issue

Environment and Human Toxicological Risk: Experiences and Challenges

Message from the Guest Editors

The identification and characterization of environment and human toxicological risk remain long-term challenges in environmental research and public health. Thousands of chemicals are currently produced and used, together with a few hundred new chemicals being designed and developed every year. These chemicals are ubiquitously detected in environmental media and biota matrices. At the same time, legacy pollutants, such as chlorinated pesticides and their metabolites, are still a concern due to their high detection rates in the general population. Other environmental stressors, such as magnetic fields and noise, also induce short- and long-term implications for human health. Only a few of these environmental stressors and even fewer combination mixtures have been thoroughly studied in regard to their health risks, which represent continuous challenges for toxicological research.

This Special Issue of the International Journal of Environmental Research and Public Health (IJERPH) focuses on the resulting knowledge gained about environmental stressors and their risks to human health.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
