Public Health Approaches to Oral and Periodontal Health

Message from the Guest Editors

Despite significant advances in clinical dentistry, oral and periodontal diseases continue to pose a major public health challenge globally. Their high prevalence and profound impact on quality of life and systemic health demand effective, population-wide solutions. This Special Issue seeks to explore the broad spectrum of public health approaches designed to prevent, manage, and reduce the burden of these conditions.

We welcome submissions of original research, systematic reviews, and case studies that focus on population-level interventions. Key areas of interest include health promotion programs in schools and communities, policy-making for oral health, and strategies for integrating oral health services into existing primary care frameworks. We are also interested in research addressing health equity, focusing on reducing disparities in access to care and outcomes among underserved and marginalized populations.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
