

Special Issue

Improving the Quality of Life of Breast Cancer Survivors

Message from the Guest Editors

Breast cancer is the most common neoplasia among women, annually affecting 2.1 million worldwide. Both the diagnosis and the adjuvant treatments administered impact not only the physical but also the mental health and quality of life of the patients who suffer from it. Multidisciplinary evaluations of the quality of life will allow providing quality healthcare attention to the health status of patients during this chronic disease, identifying associated comorbidities and offering more individualized assistance. This Special Issue is intended to propose new approaches regarding the psychological and medical factors that affect the mental and physical health and quality of life of patients and survivors of breast cancer to develop novel intervention proposals that improve the quality-of-life levels and health status of this clinical population.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
