

Special Issue

Promoting Recovery in Mental Health—Perspectives and Experiences of Professionals and Service Users

Message from the Guest Editors

We would like to invite papers to this Special Issue of the *IJERPH* that will explore Recovery in Mental Health—Perspectives and Experiences of Providers and Service Users. In Western countries, treatment and rehabilitation in psychiatric hospitals and municipalities must be based on a recovery-oriented approach, but we have little research on what “recovery-oriented” means in practice or how service users experience providers’ support in their recovery process. In addition, we have inconclusive research on service users’ experiences of recovery without the support of mental health providers. As a result, we need empirical research about promoting recovery in mental health from the perspectives and experiences of providers and service users. This Special Issue welcomes papers examining recovery in an institutional context and service users’ experiences of recovery in their everyday lives.

Keywords: mental health; intersectionality; non-medical perspective; community; minorities; social and environmental determinants of health; substance abuse; philosophy of science; family- and network therapy; recovery and recovery-oriented practices

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
