Renewable Energies: Environmental Impact and Social Acceptance

Message from the Guest Editors

As climate change and resource scarcity are acknowledged as two of the most pressing subjects for the scientific community, policy makers and the general populace alike, the topic of renewable energy sources is increasing in importance. In 2018 18.9% of gross energy consumption in Europe was from renewable sources, and the key target for renewable energy in Europe in 2030 is a 32% share with a probable upward revision in 2023, while for example China is expected by 2024 to increase its share of renewable energy by 40% (IEA, 2019). Despite this need and the push from legislative bodies, social acceptance of renewable energy sources is still hampered by lack of knowledge in the general public and NIMBY dynamics, in particular for landscape altering plants (i.e. wind power, solar farms) or from plants that resemble chemical reactors (i.e. biogas plants, microalgae farms). Moreover, several of these technologies can yet see their environmental impact lowered, for example in the case of methane slip for the upgrading of biogas to biomethane or for the disposal of solar panels. Solving these problems will be crucial in the next years to safely meet renewable energy targets.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

Centre for Public Health, Equity and Human Flourishing, Torrens
University Australia, Adelaide 5000, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
