

## Special Issue

# Determinants of Risk-Taking Behaviour in Young People: Implications for Innovative Interventions

### Message from the Guest Editor

Adolescence is an important period in life where knowledge, skills and practices are shaped that have impact on life prospects and chances. In this developmental phase, the complex interplay of biological, psychological and social changes results in new opportunities, but also in increased vulnerabilities. This Special Issue will synthesize what is known about the complex determinants of adolescent risk-taking behaviour, with an emphasis on multidisciplinary perspectives taking individual and environmental factors into account. It also aims to collect lessons learned from innovative interventions, with a focus on interventions designed in co-creation with adolescents and those that use both quantitative and qualitative or realist evaluation designs.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
