

Special Issue

Rural Health Workforce (2nd Edition)

Message from the Guest Editors

We encourage articles about specialty-level services by various health worker types, countries, rural contexts, and clinical settings. These may include literature reviews, articles describing or evaluating workforce and service interventions, and insights that can inform the development and maintenance of specialist service capacity in rural areas. Articles will need to define the rural location and its characteristics, be clear about the context of the population's need for the form of specialty care (what the rural problem is), define any specialist providers and their qualifications, and ensure that it is clear as to how the specialist care is accessed, for example, through referral or first point of contact, and any telehealth modalities or outreach parameters are clear. We encourage the use of globally standard terminology to allow for generalizability. We thank you in advance for your contributions. With your assistance, we can shed some light on this critical issue in order to improve the health of regional, rural, and remote people.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
