

Special Issue

Innovations in Pain Assessment and Management in Critical Care Nursing

Message from the Guest Editors

With the upcoming update to the World Health Organization's international pain management standards, research is vital in informing best pain management practices and their sustainable implementation for improved quality of care and recovery.

This Special Issue of International Journal of Environmental Research and Public Health (IJERPH) will focus on topics related to innovations in pain assessment and management across the lifespan of critically ill populations. Any advances and new discoveries in biopsychosocial pain assessment and management at the individual, family, or community level, including methodological papers, reviews, research studies (e.g., qualitative, quantitative, and mixed-methods research), and brief research reports will be considered. We encourage contributing authors from critical care nursing and other disciplines to submit manuscripts and discuss the clinical implications of their research, as to make this Special Issue the latest synthesis of cutting edge knowledge on pain assessment and management in critically ill populations.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
