Special Issue

Concussion in Sports: Education, Prevention, Identification, and Management

Message from the Guest Editor

Concussions are a public health concern that can lead to potential short- and long-term health consequences that impact an individual's physical, cognitive. emotional/behavioral, or sleep health. Given the potential consequences of concussions, over the last decade or so, increased attention has focused on the prevention, identification, and management of concussion in sport. However, despite the increased attention on concussion in sport, additional research that aims to identify effective strategies to reduce concussion risk and improve post-concussion outcomes is critically needed. Such research has the potential to foster a culture of concussion safety in sport and improve the health and wellbeing of individuals affected by concussive injury. This Special Issue will feature novel research on concussion education. prevention, identification, and management. Papers that examine innovative approaches to concussion education and prevention are particularly welcome, as are papers exploring health disparities in concussion education, prevention, identification, and management. Papers are welcome from all disciplines.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
