

# Special Issue

## Light Pollution

### Message from the Guest Editors

This Special Issue of the International Journal of Environmental Research and Public Health (IJERPH) focuses on Light Pollution. Artificial outdoor lighting at night (ALAN) can be a source of unwanted light pollution, which is visually perceived as a brilliant hemisphere surrounding the city sky. The sky glow is perceptible even from space. It should be noted that this unnecessary brightening of the sky is not just a “sky glow” effect, but also causes other unwanted effects such as biological light pollution and negative impacts on human health. ALAN is increasing rapidly and can disturb nightscapes, ecosystems, and consequently biodiversity—including protected areas. It is also wasted electricity, which negatively affects the environment in the form of air dust, greenhouse gases, and the production of ash and slag emissions by power plants. Papers addressing these topics are invited for this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
