Health Services and Rehabilitation Research of Older Adults

Message from the Guest Editors

The world's population is ageing rapidly, and it is critical that health services are ready for the treatment of these patients and the prevention of disabilities. Senescence produces physiological losses with decreased functional capacity in all systems of the organism, so even healthier ageing could cause incapacity, frailty, falls and deaths. Rehabilitation services should be prepared to receive patients with different types and levels of disabilities, including frailty, sequelae of vascular accidents, musculoskeletal diseases, sensory and cognitive losses, and others. This Special Issue aims to publish original articles and systematic reviews of disabilities related to senescence and senility: frailty, sarcopenia, osteoporosis, musculoskeletal diseases, metabolic syndrome, neurological diseases, and cognitive losses. Additionally, articles on mental health, nutrition, physical activity, sports, and community life will be included, as well as those on the theme of ageing with some physical incapacity. Articles on rehabilitation units aimed at the care of the elderly are also expected, including models and programs.

Guest Editors

Dr. Júlia Maria D. Andréa Greve

Dr. Guilherme Carlos Brech

Dr. Angélica Castilho Alonso

Dr. Adriana Machado-Lima

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
