

Special Issue

Social and Emotional Aspects of Working in the New Normal

Message from the Guest Editors

The aim of this Special Issue is to publish contributions on the social and emotional aspects of work in the new normal. We welcome the submission of studies examining how different types of workplaces or organizational environments, such as schools, where teachers, students and parents interact; hospitals, where nurses, doctors and patients interact; and government settings, among many others, affect the social and/or emotional aspects of individuals, along with the various precursors that contribute to such changes. In addition, we are also interested in research that analyzes the impact of the new normal on human behavior and emotions, and what can be done to improve the workplace or organizational environment. The following are some additional topics that may be of interest, but the Special Issue is not limited to these: social and/or emotional health and/or wellbeing of individuals in the workplace; how social and/or emotional aspects of individuals are affected by technology; social and/or emotional development of students; social and/or emotional effectiveness.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
