Smart Support for Health Care Systems

Message from the Guest Editor

The integration of e- and m-health can lead to optimally connected health care systems supporting personalized care, promoting guideline adherence and efficiency. Although the potential benefits of e- and m-health systems are enormous, the current challenges are also numerous. These include issues related to the establishment of legal norms and a regulatory framework for the protection of privacy and security of health care data; laying the foundations for an ever growing need for inter-disciplinary collaboration; formulating the protocols and standards to achieve technical, syntactic and semantic interoperability of systems; outlining the requirements for best digital network performance with seamless connectivity, secured transmissions and optimal data storage; and designing a framework for the critical assessment of e- and m-health systems. In this Special Issue, we are looking forward to your contributions with reference to the current status of e- and m-health systems. All types of manuscripts, including original research articles, reviews, case reports, methodological articles, position papers, brief reports, and commentaries are welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
