

Special Issue

Socioeconomic Status and Lifestyles as Determinants of Mental Health during the COVID-19 Outbreak

Message from the Guest Editors

Illness and disease are particularly pronounced among low-SES groups and that health risk factors can be prevented through healthy lifestyles. However, it is not clear whether low-SES people are as successful in their attempts to make lifestyle and behavioural changes as are high-SES people. In this special issue, we invite researchers in public health, epidemiology, health economics, biostatistics, psychology and sociology to submit high quality empirical papers or systematic reviews that will further broaden our understanding of the factors that can address the mediating role of lifestyles in social inequalities in mental health during the COVID-19 pandemic. Papers that include qualitative, quantitative, mixed methods or more innovative computational approaches are welcome, as are studies that discuss the design, implementation, and evaluation of behavioural and policy interventions aimed to address mental health problems derived from this new pandemic.

Guest Editors

Prof. Dr. Javier Alvarez-Galvez

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
