

## Special Issue

# Sustainability and Resilience in Health: The Role of Performance Management

### Message from the Guest Editors

This Special Issue of the *International Journal of Environmental Research and Public Health (IJERPH)* seeks to advance our understanding of managerial strategies, governance mechanisms, as well as performance management systems that can be applied to cope with different scenarios. Specific themes include (but are not limited to) the following:

- How performance measurement systems evolve, or should evolve, to support decision-makers in dealing with the emergent challenges. What are the implications for information systems?
- How does the organization and management of different health systems capture the health and social needs of populations?
- What could be the factors that help to build resilience, making it easier for health systems to respond effectively to future challenges?
- How can embracing the multifaceted elements of value in performance management lead to a sustainable health system?
- What are the intended or unintended consequences of the different strategies health systems and organizations implemented for the evolving scenarios?

---

### Guest Editors

Dr. Milena Vainieri

Dr. Laura Rosella

Dr. Guido Noto

Dr. Francesca Ferré

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
