Sustainable Consumption in Environmental Issues: A Global Perspective

Message from the Guest Editors

Sustainable consumption is defined as the consumption of products and services in a way that minimizes environmental impact and meets consumer needs for both present and future generations. Sustainable consumption can be promoted to improve sustainable performance, meet consumer needs, increase the quality of life, enhance resource efficiency, increase renewable energy use, minimize waste, and reduce carbon emissions. As a result, sustainable consumption, which can help us to achieve sustainable development goals (SDGs), plays a more important role in our society. On behalf of *IJERPH*, we are organizing the Special Issue "Sustainable Consumption: A Global Perspective". This Special Issue offers an opportunity to publish high-quality interdisciplinary research that focuses on sustainable consumption. We invite colleagues from all disciplines to submit papers discussing the topics related to sustainable consumption by means of qualitative, quantitative, or mixed-methods approaches. In addition, we look forward to receiving a variety of manuscripts which can contribute to comprehensively improving for sustainable consumption.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
