

Special Issue

Applications of Thermal Imaging in Public Health

Message from the Guest Editor

This Special Issue aims to publish original research, systematic reviews, technical communications, and technical protocols that help solidify the application of thermography in medicine. Authors from related areas, who have used thermal imaging for basic research that has direct application in human health, such as research for the development of fabrics or equipment that improve thermoregulation, are also invited to participate in this Special Issue. We invite authors who have used thermal images in the areas of human health, or who have developed some application of artificial intelligence or machine learning applicable to the processing or analysis of thermal images to contribute to the advancement of scientific knowledge by publishing their works.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

School of Society and Culture, Adelaide University, Adelaide 5001,
Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
