

Special Issue

The Sociology and Healthcare Perspective on Family and Migration

Message from the Guest Editors

Fundamental changes in the examinations of health and migration have occurred in recent years, resulting in considerable refocusing of academic attention. With changing migration patterns worldwide and across receiving countries, sociological discussions on barriers to health and healthcare among migrants and their families have suggested a need for intersectionality perspectives. With limited dialogue on these perspectives, discussions in understanding the impact of the intersections of gender, race, sexuality, culture, economic, and other social influences on the health and health-related experiences of migrant populations become necessary. This Special Issue welcomes articles that address these perspectives and the role of globalization and neocolonialism in shaping patterns of health inequalities in native and/or destination countries. We especially welcome research that utilizes interdisciplinary frameworks (i.e., critical race theory, social determinants of health, etc.) to inform its inquiry.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
