

Special Issue

Emerging Technology in Promoting Physical Activity

Message from the Guest Editors

This Special Issue invites investigators to examine

- barriers and facilitators to the use of emerging technologies as intervention implementation strategies for promoting physical activity for a targeted population;
- immediate, short-term, and/or long-term effectiveness of technology-integrated physical activity interventions in increasing and/or sustaining physical activity behaviors for people across the lifespan;
- the extent to which a technology-enhanced physical activity intervention is feasible, acceptable, doable, and/or sustainable for a targeted population; and
- factors impacting participants' adoptions, implementation, and/or maintenance of a technology-integrated physical activity in their daily routines.

It is worth noting that investigations will not be limited to the potential focuses described above.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
