

# Special Issue

## Tourism and Health

### Message from the Guest Editor

Tourism and health are inseparable because people can relax both mentally and physically through travel. For example, along with economic growth, people hope to enhance their quality of life, so they travel to improve their mental health. Another example is medical tourism because a lot of people travel abroad for basic medical treatments, highly advanced surgical procedures, healthcare, and beautification purposes. More importantly, such medical tourism significantly affects the national economy. The Special Issue seeks papers on health in the context of tourism. This Special Issue is theoretically meaningful because little research has examined the relationship between tourism and health. In addition, from a practical point of view, this Special Issue is expected to play a significant role in developing marketing strategies for travel agencies, focusing on medical tourism.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
