

Special Issue

Exposure Science and Toxicology for Infants; Anthropogenic and Naturally Produced Environmental Pollutants, Pharmaceuticals and Personal Care Products

Message from the Guest Editors

This special issue covers both exposure science and toxicological study for infants. We welcome manuscripts from different disciplines that aim to elucidate the health effects in infants; chemical exposures in humans, in vivo and in vitro toxicological studies, and health impact assessment/management. Solid though preliminary studies are welcomed if they have the potential to stimulate and contribute to environmental health for infants. Fundamental criteria for acceptance is that the study is original, scientifically sound and provides valuable knowledge which will lead to new insights or hypothesis to future studies. As well as the original articles, we also welcome other types of articles such as reviews, study protocols and project reports as an integration and update of current knowledge. This special issue will help elucidate environmental health for infants, which is a still unclear research domain.

Guest Editors

Prof. Dr. Yukiko Fujii
Dr. Junxia Yan
Dr. Hyeran Yang

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
