

Special Issue

Urban Spaces, Environmental Exposures, Public Health, and Human Wellbeing

Message from the Guest Editor

COVID-19 has put forward higher requirements for urban spatial health, and the study of healthy cities has once again become the focus of multidisciplines. Urban space has a direct or indirect effect on public health and human wellbeing. However, public health is affected by multiple complex factors and pathways, and most of the existing research results are single-element and fragmented, which brings challenges to the implementation of health-oriented spatial planning.

From the perspective of the interaction between environmental exposure and physical activity, we aim to construct a relatively complete theoretical framework model between urban spaces, public health, and human wellbeing and propose health-oriented planning techniques.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
