

Special Issue

Vulnerable Communities and Public Health

Message from the Guest Editor

I am pleased to announce this Special Issue entitled “Vulnerable Collectives and Public Health” for the International Journal of Environmental Research and Public Health (IJERPH).

This Special Issue seeks contributions that address the particular conditions of vulnerable social groups in public health, health services, health system research and health economics.

Potential articles can identify the differences in the established topics for vulnerable groups. However, articles that are more general and that make a substantial contribution to the topics specified in this Special Issue, as well as methodological reviews and evaluations, are also welcome.

Vulnerability can be due to various socioeconomic factors (gender, disability, age, economic situation, employment situation, migration) or more specific factors such as gender-based violence. All situations have a place in this Special Issue.

Recent studies defend as fundamental the identification of the different needs of the different groups in relation to health and health services, in order to design more efficient and effective policies in the medical and health care of the population.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
