The 9/11 Disaster and Other Man-Made Trauma Events and Their Health Effects

Message from the Guest Editor

In the 21 years since the World Trade Centre disaster in New York City on September 11, 2001, there have been nearly 1,000 publications on both the physical and mental health effects of this unprecedented disaster, with about 200 of those originating from data based on the World Trade Center Health Registry. Many subsequent human-made trauma events since 9/11 have occurred worldwide, including the wars in Syria, Yemen, and Ukraine, and one-time events of mass-killings in Mumbai, Paris, the United States, and many others. This Special Issue is an opportunity to report on and document the health-related and societal consequences of human-made trauma events and the ways in which the consequences for both physical and mental health have been mitigated and reduced.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

School of Society and Culture, Adelaide University, Adelaide 5001,
Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
