

Special Issue

Effects of Climate Change on Soil and Water Environment

Message from the Guest Editor

The Special Issue aims to showcase and summarize state-of-the-art studies on the effects of climate change on water and soil environments. We welcome papers that address the environmental biogeochemistry of nutrients and trace element cycling, contaminant behaviors and ecological risks, microbiome, gene networks in water and soil systems under climate change. The changes of soil ecosystem functional services, soil and water resources carrying capacity, related management or policies to cope with climate change, and contributions discussing related topics still of interest in the field of environment and public health research, are also welcome.

Guest Editor

Dr. Junwei Ma

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
