

Special Issue

Women Health and Gynecology

Message from the Guest Editors

Environmental pollutants comprise certain chemical, physical and biological substances, that have harmful effects on human well-being. The environmental pollutants refer to air pollution, exposure to heavy metals, endocrine disrupting chemicals, pesticides, polychlorinated biphenyls, ionizing radiation, occupation and working environment. The adverse effects of these environmental factors on the overall health and reproductive health, as well as on women's well-being depends on the dosage, timing, duration of the exposure through the ingestion, inhalation, transdermal and mucosal absorption. This special issue of IJERPH focuses on the current state of knowledge on the links between Environmental factors & Public health on one side, and Women health and Gynecology, on the another. We will accept manuscripts from different disciplines including Obstetrics & Gynaecology, public health, epidemiology, intervention studies, risk and health impact assessment, risk management of environmental factors and issues in OBGYN.

Guest Editors

Prof. Dr. Milan Terzic

Dr. Antonio Simone Laganà

Prof. Dr. Antonio Sarria-Santamera

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
