

## Special Issue

# Women's Health: Molecular and Morphological Perspectives

### Message from the Guest Editors

The concept of health is defined as the state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity. It has become evident that the definition of health must be applied differently for women compared to men. Therefore, a new medical discipline has developed, referred to as gender medicine, with the aim to achieve equality in access to and use of medical treatment. This implies the involvement of basic research into those aspects typical of certain lesions that are particular to women, these can be derived from environmental exposure, or related to breast cancer, assisted reproductive technologies, osteoporosis therapies, or lesions that can be used as forensic proof in the case of violence.

This Special Issue invites original contributions, including original research, short communication, and reviews, on the biological, biochemical, morphological, clinical and observational studies that focus on any factors that can cause peculiar lesions, altering women's health and their relative environmental and public health.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
