Women, Patriarchy and Health Inequalities: An Unresolved Issue

Message from the Guest Editors

Globally, the evidence of health inequalities between women and men provides a stark picture of the systematic undervaluing of women, including their perspectives, roles and work. Racism worldwide compounds experiences and outcomes for women, with developing countries carrying the burden of health inequities. The social, economic, commercial and environmental determinants of health are profoundly influenced by gender relationships. Social and political actions at multiple levels are required to achieve 'whole-system' change. This Special Issue seeks research and analysis papers on various aspects of health inequality and the impacts on and opportunities for women. We encourage submission of work that applies critical analysis and focuses on power relationships, capitalism, patriarchy, heterosexism, human rights, the health system and social determinants. We welcome submissions on disability, gender fluidity, ageism from developing countries, Indigenous peoples and other groups such as refugees whose voices are less heard.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
