Men's Health Nursing

Message from the Guest Editors

Nursing in men's health is a growing and developing scientific and practical field that requires the engagement of researchers around the world. Men in various countries have a reduced life expectancy due to diseases and poor health conditions, in which the role of nursing professionals is crucial to changing scenarios, behaviors, attitudes, and health practices. Scientific evidence from various perspectives and disciplines has been gaining prominence in studies on men, masculinities, care, and health, making the advancement of nursing in this field essential. We hope to promote scientific dissemination, stimulate knowledge translation, increase the visibility of researchers, and contribute to the growth and maturity of the field on a global scale. The following are welcome: original research using diverse methodological approaches; systematic literature reviews; case reports on specific contexts of men's health conditions; studies on technological development and innovation; and theoretical studies that present new concepts, models, and theories, and advance scientific knowledge in the area of interest.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
