

Special Issue

Health and Well-Being of Health Care Workers and Students in the Time of COVID-19

Message from the Guest Editor

The COVID-19 pandemic has posed serious health risks for the global community, especially to the health care workers and students caring for clients with or without COVID-19. Different types of health care workers and students working in different settings ranging from hospitals, nursing homes, and education, to community settings, are facing unprecedented challenges and occupational hazards. These challenges and hazards might affect their physical, musculoskeletal, mental, social, intellectual, spiritual, occupational and environmental health. The lockdown and social distancing policies have expedited the use of technology in health care and education systems, which has created a “new normal” in the work and teaching and learning environment. This Special Issue of the *IJERPH* will include research and review papers on the effects of COVID-19 on health care workers and students, and interventions to improve vaccination rates and work and education environments, thus enhancing their health and wellbeing.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
