Migrant Health Challenges in Infectious and Non-Communicable Disease Epidemiology

Message from the Guest Editors

The health challenges faced by migrant populations in the context of infectious disease epidemiology are significant and multifaceted. Migrants often encounter barriers to healthcare access, socio-economic disadvantages and cultural differences, which can exacerbate their vulnerability to infectious diseases. These challenges are further deepened by their mobility, making the surveillance, prevention and treatment of infectious diseases more complex. This Special Issue aims to gather research and insights that address these critical issues, with the goal of improving health outcomes for migrant populations. We invite contributions that explore various aspects of migrant health, including, but not limited to, epidemiological studies on infectious diseases, healthcare access and utilisation, socio-economic impacts, cultural competency in healthcare delivery and policy responses. By focusing on these topics, we hope to highlight the urgent need for tailored public health strategies and interventions that can effectively address the unique health challenges faced by migrants in the domain of infectious diseases.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
