

Special Issue

Health Care for Older Adults

Message from the Guest Editors

The increase we have witnessed in life expectancy in recent years has been a historical milestone in the history of humanity. We have never lived this long before. Nevertheless, this social success presents great clinical and social challenges. Giving best care to older adults efficiently is one of the greatest challenges of developed countries. This Special Issue aims to explore different initiatives that result in the health promotion of older adults, such as multicomponent physical exercise programs, interventions that try to avoid loneliness and social isolation and multidisciplinary assessment, and the treatment of frailty and other geriatric syndromes, of the elderly in various settings such as the Emergency Unit, Orthogeriatrics and Oncogeriatrics. Special interest will be given to innovative practices that expand and build upon geriatric approaches with multidisciplinary models. Other manuscript types of interest include relevant position papers, meta-analysis, reviews, brief reports, and commentaries.

Guest Editors

Dr. Francisco José Tarazona Santabalbina

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
