Health Management in Person-Centered Care

Message from the Guest Editors

Person-centered care is the contemporary paradigm when it comes to healthcare planning and provision. Its rules apply equally to, among others, general practice, acute medicine, nursing, long-term care, rehabilitation, and occupational therapy. Recently, the COVID-19 pandemic had a profound impact on the function of numerous societal groups and, consequently, on the concepts and organization of care. It is, thus, imperative to establish current conditions and relationships and provide recommendations for successful health management in person-centered care.

Potential topics include, but are not limited to, the following:

Modern approaches to health management; The impact of COVID-19 on person-centered care;

New solutions and technologies for person-centered care;

Determinants and factors of successful health management in person-centered care; Pain

management in person-centered care; Medical and

pharmacological factors in person-centered care;

Nursing in contemporary health management;

Comprehensive assessment and interventions in health management; Cognitive assessment and interventions

in person-centered care; Rehabilitation and revalidation in person-centered care.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
