

Special Issue

Investigations into Food Hygiene and Public Health: A Focus on Microbiological Contamination

Message from the Guest Editor

This Special Issue will focus on innovations which include but are not limited to the implementation of new technologies for preventing and/or reducing food microbiological contamination in all the food chain steps, enhancing food safety and quality. Therefore, I would like to invite authors to submit original innovative research articles and review papers related to the potential topics of the “Investigations into Food Hygiene and Public Health: A Focus on Microbiological Contamination”. Potential topics include but are not limited to the following: food processing methods for enhancing food quality and safety, smart packaging for food contamination monitoring/control devices for improving the evaluation of microbial food contamination, monitoring of microbial contamination in the food chain, good microbe utilization for preventing pathogen contamination, biosensors and/or biomarkers useful for food contamination detection, new devices implemented for removing microbial food contamination, surveillance of foodborne diseases due to microbial contamination, and innovative methods for monitoring food microbial contamination in the production and transport chain.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
