New Advances in Prevention and Management of Cardiovascular Disease

Message from the Guest Editor

Despite many decades of committed efforts to reduce the burden of cardiovascular disease, it continues to be the leading cause of death worldwide. Evidence-based guidelines and policies exist to help prevent and manage cardiovascular disease. However, rates of cardiovascular risk assessment are low in primary healthcare, admission and readmission rates are still high, many of those with cardiovascular disease are not provided with the optimal care, and patients find it challenging to adhere to the appropriate management after surviving the disease. In this Special Issue, we welcome your work that explores or attempts to find solutions to these ongoing issues that impede the prevention and management of cardiovascular disease. This includes methods to provide and/or promote primary or secondary prevention and management of cardiovascular disease at the policy-level, patient-level, and different levels of the healthcare system. Innovative, scalable approaches to provide support for the clinicians and patients are also invited.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
