Advances in Suicide Prevention: Lived Experience, Science and Implementation

Message from the Guest Editors

Advances along the spectrum of suicide prevention, intervention and postvention since 2000 have come from multi-disciplinary fields, including public health, psychiatry, psychology, sociology, economics, implementation science and the lived experience of suicide. Engagement of the lived experience of suicide and the integration of science in many forms, from quantitative to qualitative approaches of investigation, including mixed methods, have enhanced suicide prevention efforts globally. Increased attention is being paid to implementation measurements and understandings of the practice of suicide prevention, while technological advances are increasingly being used to support the implementation of prevention and intervention. Since the COVID-19 pandemic, suicidal ideation, non-fatal and fatal suicidal behaviour have increasingly gained the attention of public health administrators and suicide preventionists globally.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
