

Special Issue

Recent Advances in Aedes Aegypti Control

Message from the Guest Editors

We have been invited to be for a Special Issue of the *International Journal of Environmental Research and Public Health*. This issue will concentrate on new advances in the control of *Aedes aegypti* mosquitoes. *Aedes aegypti* are the main vectors of Zika, Dengue, and Chikungunya viruses. They are domestic mosquitoes that develop in urban areas in proximity to humans and human habitation. This vector is a daytime biter, develops in small bodies of water, usually flies short distances (

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
