

Special Issue

Age at Work, Well-Being, and COVID-Related Challenges

Message from the Guest Editors

In recent years, the workforce has been becoming more age-diverse. Societies are facing the challenge of successfully managing the increased age diversity of the workforce: keeping older people healthy, productive and motivated at work, and helping younger people to enter the job market. Moreover, with the COVID pandemic, new challenges have arisen, and effective strategies need to be put in place to counteract the potential negative effects for workers, organizations, and societies. The main aim of the present Special Issue is to strengthen the available evidence related to aging at work. We encourage authors to submit both qualitative and quantitative studies, and investigations adopting an interdisciplinary perspective. Contributions adopting different methodologies are welcome, such as (but not limited to) large-scale cross-sectional investigations, longitudinal studies, and diary studies.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
