Perspectives of Aged Care: Home, Community and Society

Message from the Guest Editor

Aged care plays an integral role in care in an aging society. Aged care, or elderly care, is the term for daily living and nursing care services provided to older people who either need some help at home or can no longer live independently. Various institutions and different organizational forms are important in providing aged care and could have an impact on relevant patient outcomes, such as maintaining independence or ensuring quality of life. This Special Issue focuses on the current state of knowledge on the perspectives of aged care and should consider different levels, such as the micro (home), meso (community), and macro level (society). Healthcare concepts which provide an innovative approach on perspectives of aged care performed by advanced research methods, such as prospective longitudinal designs, random controlled trials, meta-analyses, innovative technologies, and the application of these methods and technologies, are invited for this Special Issue, especially those combining a high academic standard with a practical focus on providing optimal care in an aging society. Manuscripts from different disciplines are welcome to achieve a broad perspective of aged care.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
