

## Special Issue

# Air Quality and Health Predictions

### Message from the Guest Editor

Exposure to ambient air pollution is associated with a wide array of adverse health outcomes: From chronic bronchitis to myocardial infarctions, from low birth weight to premature mortality. Studies suggest that air pollution is one of the largest environmental health risks and a leading factor for burden of disease. This Special Issue focuses on the state-of-the-science in the prediction of air quality, exposure, and health impacts, including:

- Air quality model development and applications geared towards generating high resolution pollutant concentration fields;
- Novel uses of satellite observations in predicting ground-level concentrations;
- Field studies using low-cost sensors to build dense air pollutant observation networks;
- Data fusion methods that bring together modelled and observed data to take advantage of their best characteristics;
- Comparative evaluations of different approaches to estimating exposures and predicting health impacts;
- Short and medium range forecasts of air quality, exposures, and burdens of disease;
- Wildfire and prescribed fire smoke impacts;
- Health impact assessments based on novel approaches to predicting air quality

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
