Advancing Public Health by Alcohol Control: International Perspectives

Message from the Guest Editors

Advanced studies of alcohol control policies are critical for designing, enacting and enforcing effective alcohol policies and other environmental measures to reduce alcohol consumption and the toll of related problems. We seek contributions considering both alcohol's chronic and acute harms to the individual, and harms to others. We seek papers that address impacts of alcohol control and environmental measures that promise to reduce the public health burden of alcohol problems from an international perspective. Papers could cover multiple or single national policies, state or provincial policies, or even organizational policies, such as workplace and military alcohol policies to inform international efforts to reduce alcohol's harms. In addition to specific policy appraisals, we are interested in reviews, conceptual work, and simulations that help identify mechanisms of policy action. Last, we know even less about the policy and legislative development process--locally, nationally, and internationally--and papers addressing this important domain of facilitators and barriers are also encouraged.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
