

Special Issue

The Facets of Altruism and Their Implications for Individual and Collective Wellbeing

Message from the Guest Editor

Caring for the wellbeing of others does not come without costs, be it in the form of time, money, energy, information, or organ donation. Unlike prosocial behavior and cooperation, which aim at creating benefits for all, altruism is purely other-oriented in its most genuine form. Arguably, this distinction may be crucial when it comes to the world's most challenging problems, including mass migration and climate change whose solutions are likely to incur costs to people and societies here and now while benefiting unknown others or future generations. This Special Issue is concerned with the forms of altruism that may exist, their relation to each other on the one hand, and to prosociality and morality on the other. We will explore from a multidisciplinary perspective both the caring and confrontational forms of altruism. We will elucidate the cognitive and neurobiological mechanisms underlying these forms as well as their psychological effects at the individual, group, and societal levels. Multiple methods of assessment will be demonstrated, and ethical, ecological, and political implications will be discussed.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
