

Special Issue

Assistive Technologies in Elder Care and Assistance

Message from the Guest Editors

The adoption of gerontechnological products is still low, due to a lack of strategies to improve acceptability and usability, the absence of clear personalized features, and the difficulty of demonstrating the efficacy of complex systems through evidence-based methods. A closer interaction between healthcare and technology researchers is mandatory in order to ensure that these new systems address the unsolved needs of the older population.

This Special Issue aims to provide an opportunity for researchers to submit their contributions to the design and evaluation of new technologies for monitoring and supporting human well-being in several respects: physical, cognitive, emotional, affective, and social. Within this domain, we welcome original research manuscripts including new significant technical contributions to social robotics, virtual agents and virtual reality, AI and machine and deep learning, human-computer and human-robot interaction for assisted living, and applications to support assisted-living scenarios. Given the lack of publicly available data specific to this topic, contributions also reporting realistic benchmarks related to the elderly are very welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

School of Society and Culture, Adelaide University, Adelaide 5001,
Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
