New Trends in Research on Training, Performance, Conditioning, Coaching, Evaluation and Health in Basketball

Message from the Guest Editors

Basketball is one of the most practiced sports worldwide, and it has a great impact on the media. This social importance does not escape researchers, who analyze basketball from different approaches (technical, psychological, physiological, physical, etc.). The Iberian/International Basketball Congress is an event in which the latest research results on this sport are presented in a transversal way. Therefore, it is necessary to disseminate this research in quality scientific publications, to increase knowledge about this sport. The objective of this Special Issue is to attract papers that present new trends in research in training, performance, conditioning, coaching, evaluation, and health in basketball, to keep the state of the art updated. We encourage the submission of descriptive, experimental, and cross-sectional studies aimed at the study of basketball, which analyze the physical condition, performance, health, coaching, and training of players. Studies that analyze coaches and referees are also necessary. Review articles that describe the current state of the art on relevant topics are also welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
