Behavioural Change and Socioeconomic Disparity in Health during and after the COVID-19 Pandemic

Message from the Guest Editors

Behavioural changes and socioeconomic disparity in health are a major public health issues, both during and after the COVID-19 pandemic. The COVID-19 problem will influence various aspect of human life and population health, not only through infectious disease matters, but also socioeconomic and other matters. As a result, various types of behavioural changes and socioeconomic disparity in health can be observed. For example, because smoking has been determined as a risk factor for COVID-19, smokers may intend to quit smoking during and after the COVID-19 pandemic in order to protect their life and health. This Special Issue of *International Journal of Environmental Research and Public Health* (IJERPH) focuses on the current state of knowledge on behaviour change and socioeconomic disparity in health. New research papers, reviews, case reports, and conference papers are welcome to this Issue. Papers dealing with new approaches to observe behavioural changes or socioeconomic disparity in health are also welcome. Other manuscript types include methodological papers, position papers, brief reports, and commentaries.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
