Special Issue

Biology of Human Psychology and Behavior

Message from the Guest Editors

In 1859, in his *Opus Magnum*, Charles Darwin predicted that the future of psychology would be inevitably intertwined with evolutionary theory. His revolutionary idea laid the grounds for modern biology but is yet to convince social scientists to build upon this foundation. We believe that only evolutionary theory provides a unified language for scientists of various fields to build up a strong body of knowledge. Although promising, evolutionary informed psychological science is not free from controversies and challenges. In the face of the recent rapid development of social sciences has arisen a unique opportunity and even need for the integration of psychological and natural sciences. We hope to use this Special Issue as a platform for the dissemination of multidisciplinary works that lay another brick in the bridge between psychology and natural sciences.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
