

## Special Issue

# Burnout Syndrome and Prevention

### Message from the Guest Editors

*IJERPH* is currently receiving manuscripts for a Special Issue on occupational health and risk factors in workers vulnerable to stress. This Special Issue will include articles on disorders related to the work environment and possible related variables, specifically on burnout syndrome. Occupational health is a major problem in modern work environments. According to the World Health Organization (WHO), workplace health risks cause occupational diseases and can aggravate other health problems. As a result, the incidence of occupational disorders and problems has increased in workers in recent years. Analyzing different variables related to more common occupational diseases is important to deal with them efficiently.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
