

Special Issue

Carbon Footprint and the Environment

Message from the Guest Editors

This Special Issue will be centred on carbon footprint as a way to measure the environmental implications and related management and policies. We call for papers focused on issues such as ways to measure carbon footprint, carbon footprint and land management, carbon footprint and mitigation of climate change, and carbon footprint and environmental pollutants. However, articles related to carbon and environmental relations are also welcomed as these can be the basement of future calculation of carbon footprint. A carbon footprint is not only a consequence of energy consumption and gases emission. To reduce our carbon footprint, we have to pay attention to soil management, land occupation and planning, waste management, and the presence of pollutants and derived substances. All of them have their role in the climate crisis and anthropogenic disasters, soil, air and water pollution, and human health risk.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
